Summer 2011

* **N**ew **E**nhancers of **R**oot **D**warfism

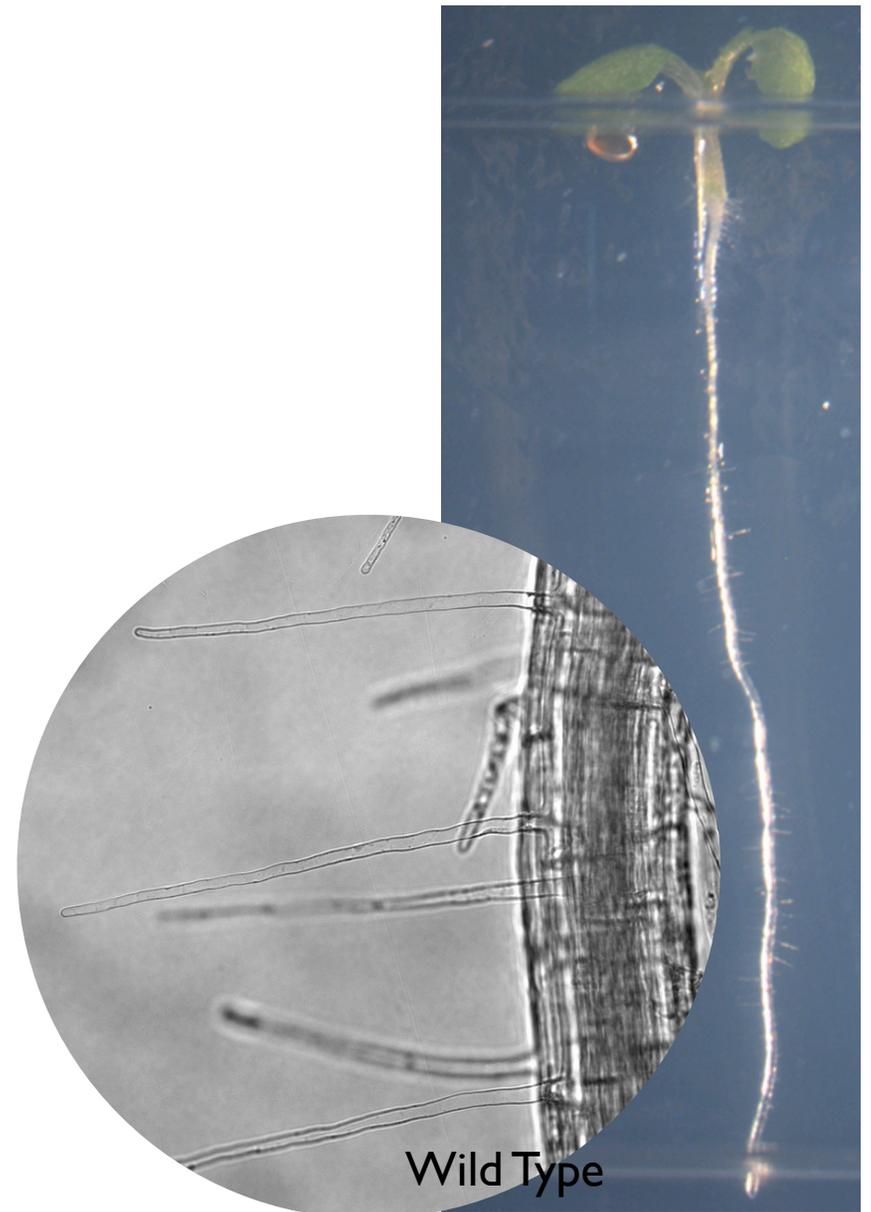

Plant Roots

- Plants obtain the nutrients and water required for survival through root growth

Plant Roots

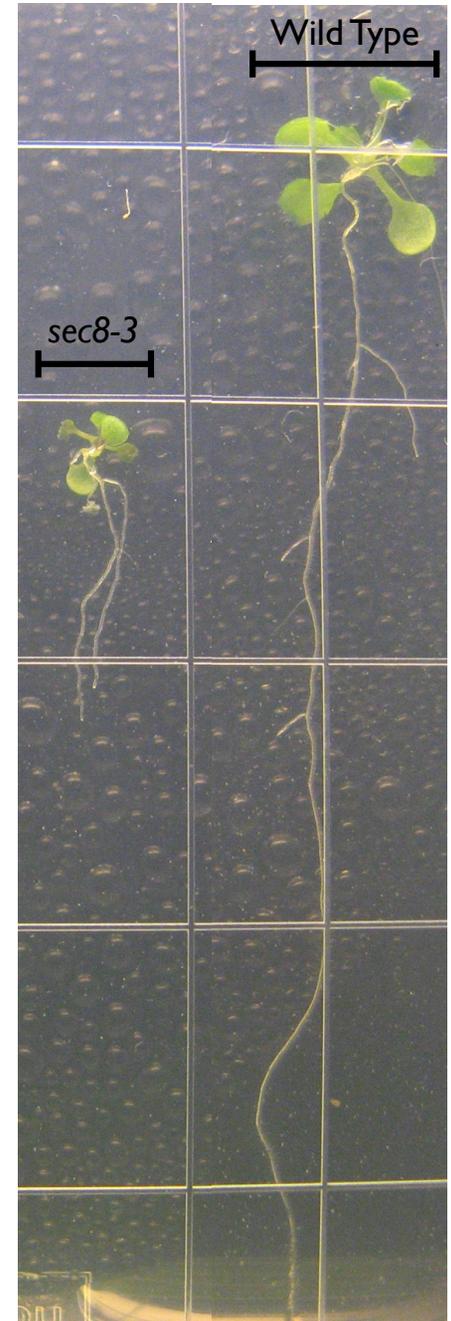

- Growth through cellular division and cellular elongation
- Root hairs are projections from a single cell
- Targeted exocytosis is important for both of these processes

Wild Type

The Exocyst

- Protein complex involved in exocytosis
- Important for secretion and targeted exocytosis, among other things
- Exocyst mutations result in stunted root and root hair growth
- *sec8-6* is not severe; phenotype is not easily visible

NERD Screen Goal:
identification of exocyst
interactors

The NERD Screen

Overview

The NERD Screen

Overview

- Through EMS exposure, mutations were introduced into many lines homozygous for the *sec8-6* mutation.

The NERD Screen

Overview

- Through EMS exposure, mutations were introduced into many lines homozygous for the *sec8-6* mutation.
- These lines were manipulated to isolate those new mutations that interacted synergistically with *sec8-6*.

The NERD Screen

Overview

- Through EMS exposure, mutations were introduced into many lines homozygous for the *sec8-6* mutation.
- These lines were manipulated to isolate those new mutations that interacted synergistically with *sec8-6*.
- An exocyst interactor would be identified when a severe mutant phenotype occurred only in *sec8-6* homozygotes.

The NERD Screen

e: *sec8-6* (exocyst mutation) allele, **a**: mutant allele from EMS mutagenesis, **+**: wild type allele

The NERD Screen

sec8-6
ee

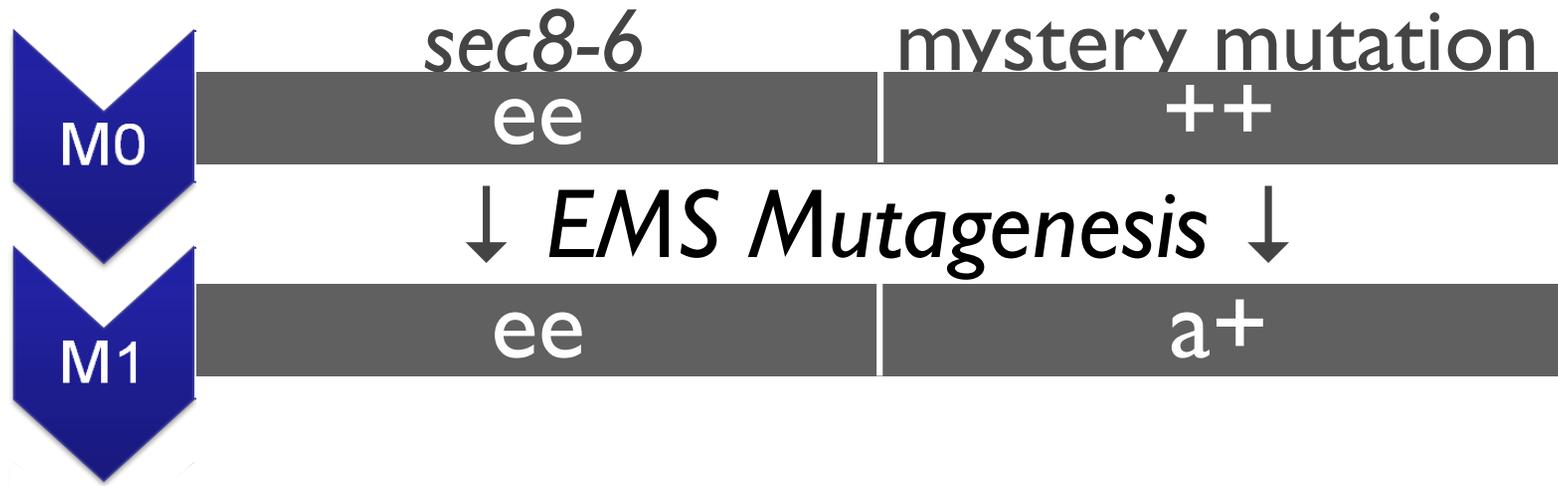

e: sec8-6 (exocyst mutation) allele, **a**: mutant allele from EMS mutagenesis, **+**: wild type allele

The NERD Screen

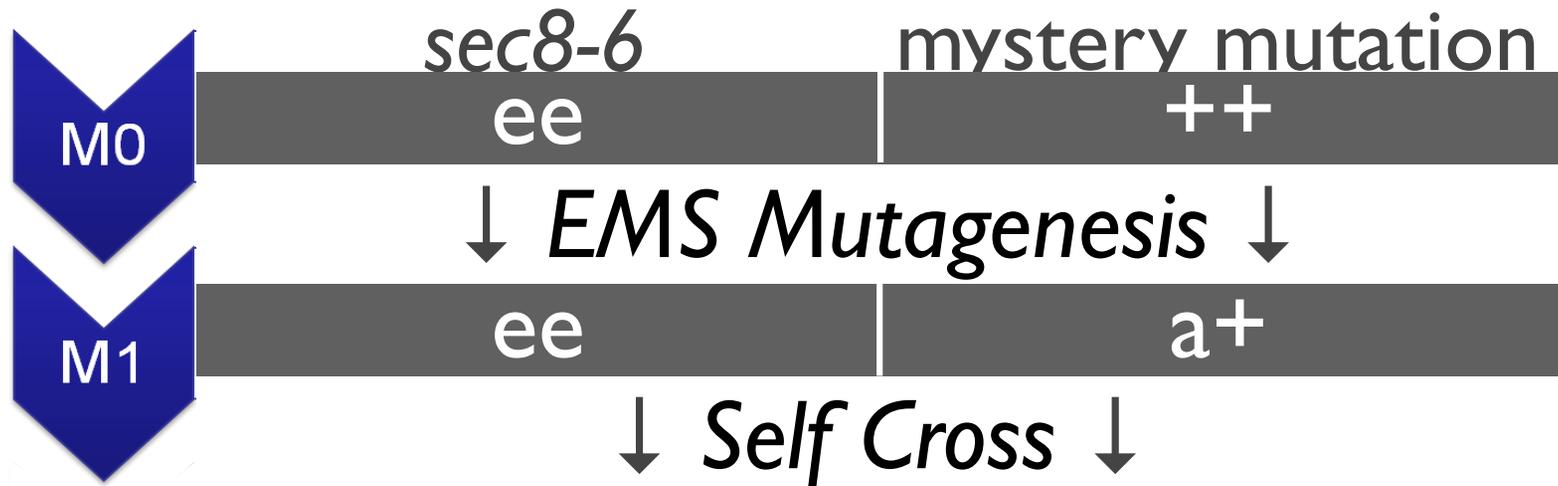

e: sec8-6 (exocyst mutation) allele, **a**: mutant allele from EMS mutagenesis, **+**: wild type allele

The NERD Screen

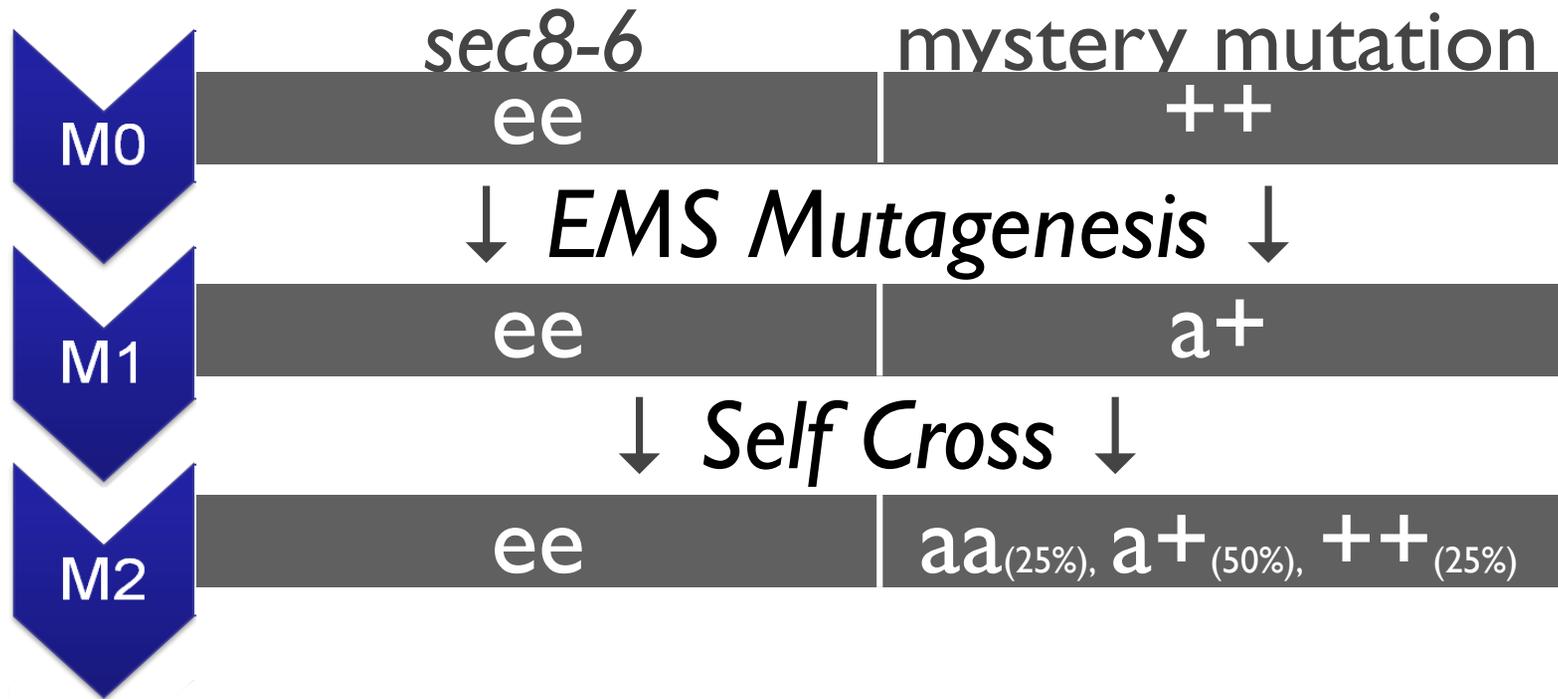

e: *sec8-6* (exocyst mutation) allele, **a**: mutant allele from EMS mutagenesis, **+**: wild type allele

The NERD Screen

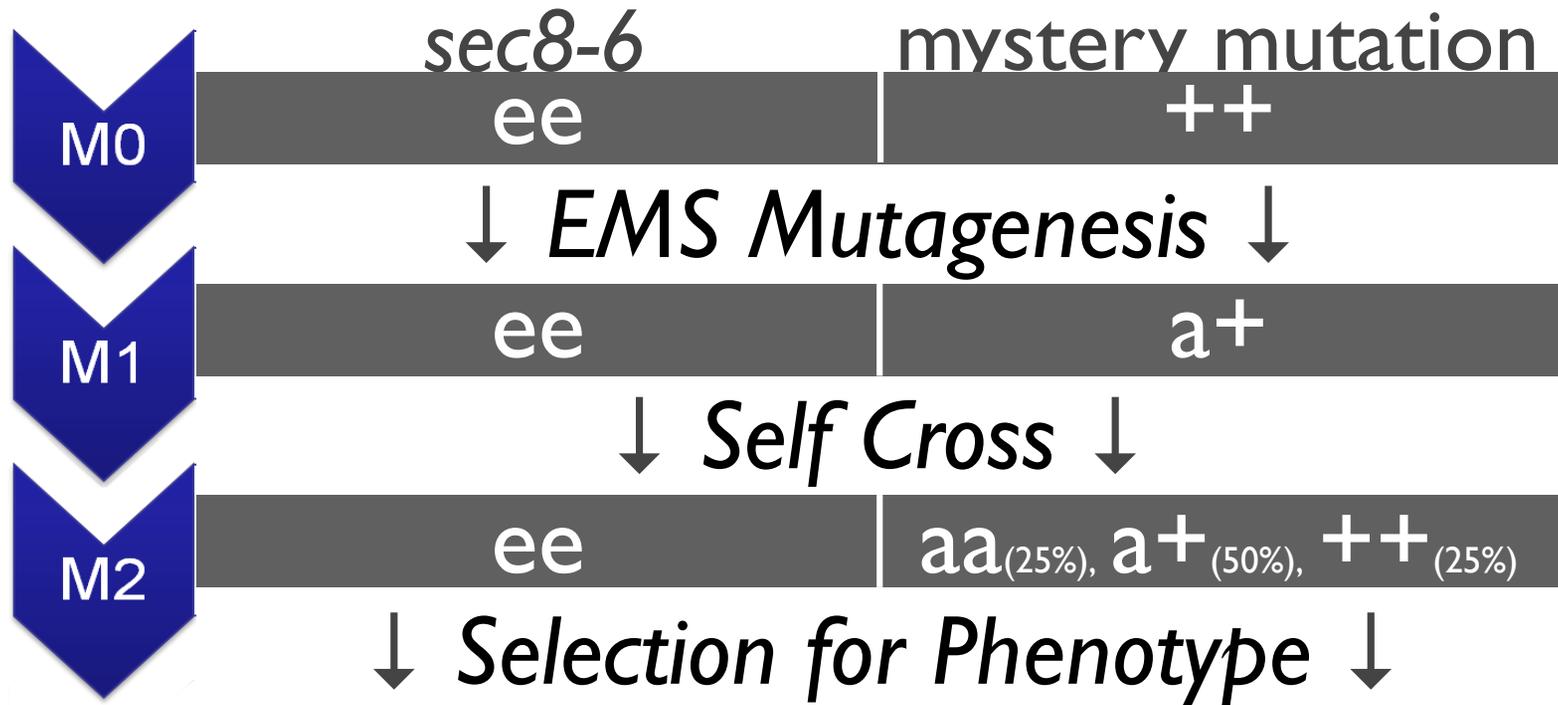

e: sec8-6 (exocyst mutation) allele, **a**: mutant allele from EMS mutagenesis, **+**: wild type allele

The NERD Screen

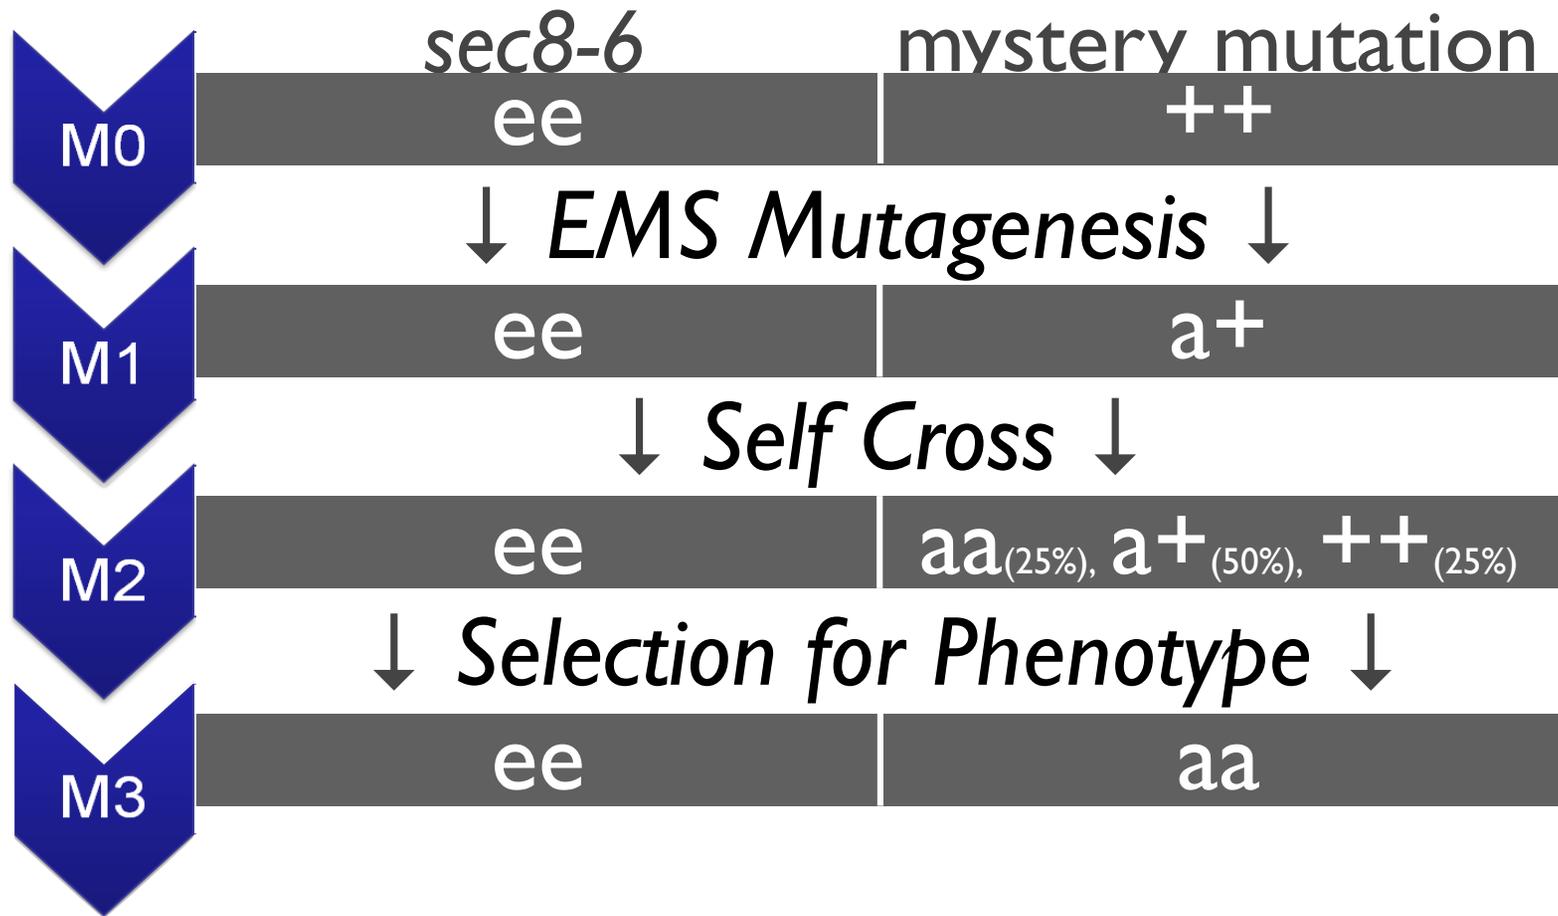

e: *sec8-6* (exocyst mutation) allele, **a:** mutant allele from EMS mutagenesis, **+**: wild type allele

The NERD Screen

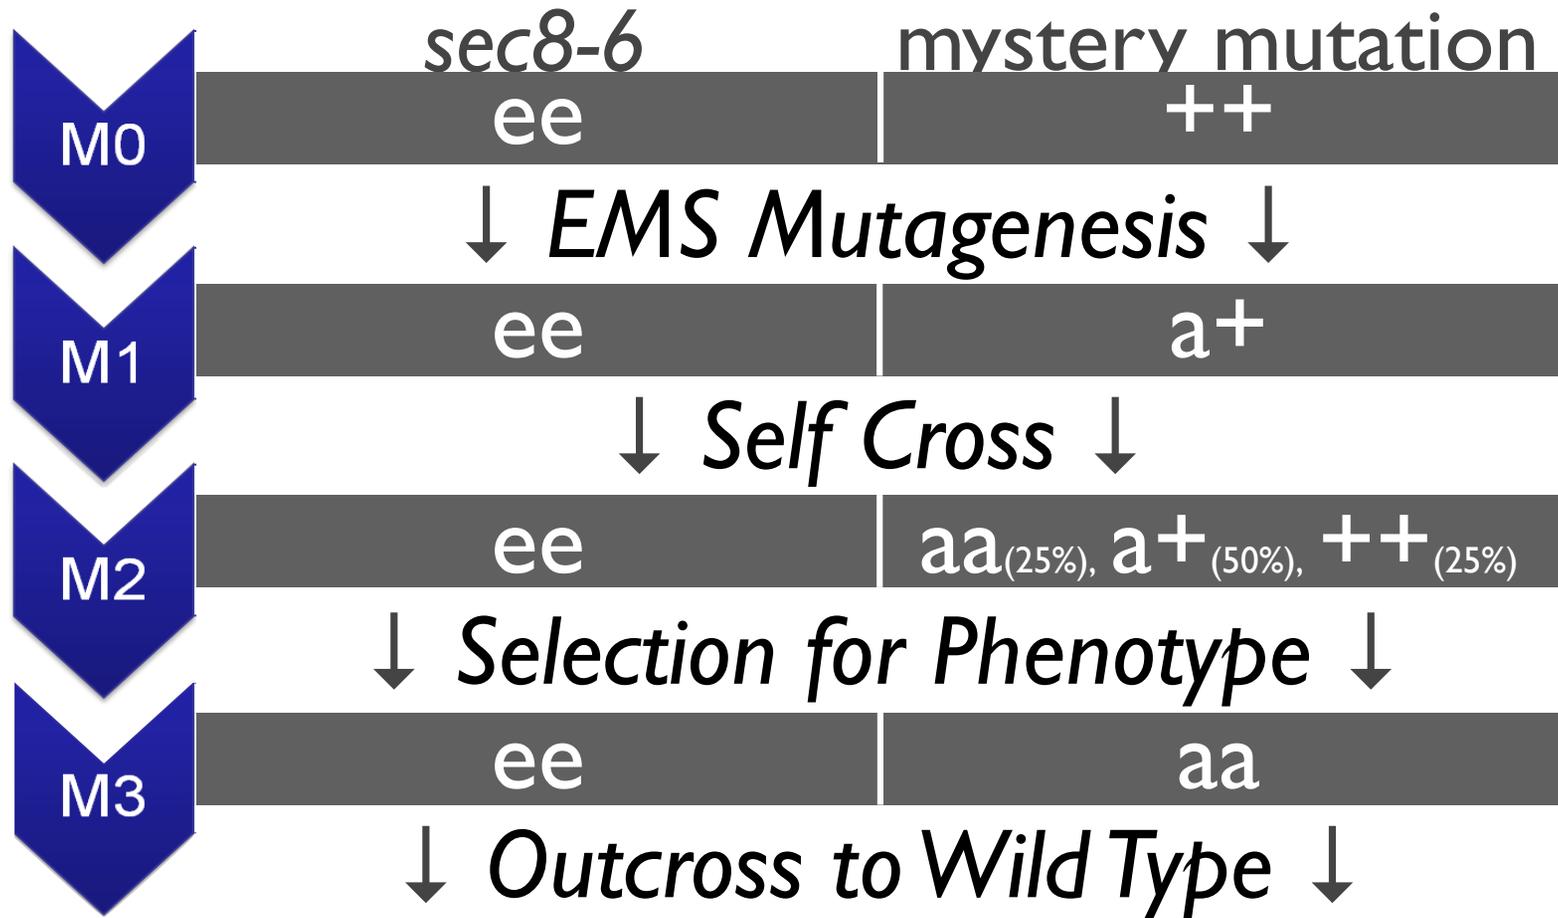

e: *sec8-6* (exocyst mutation) allele, **a**: mutant allele from EMS mutagenesis, **+**: wild type allele

The NERD Screen

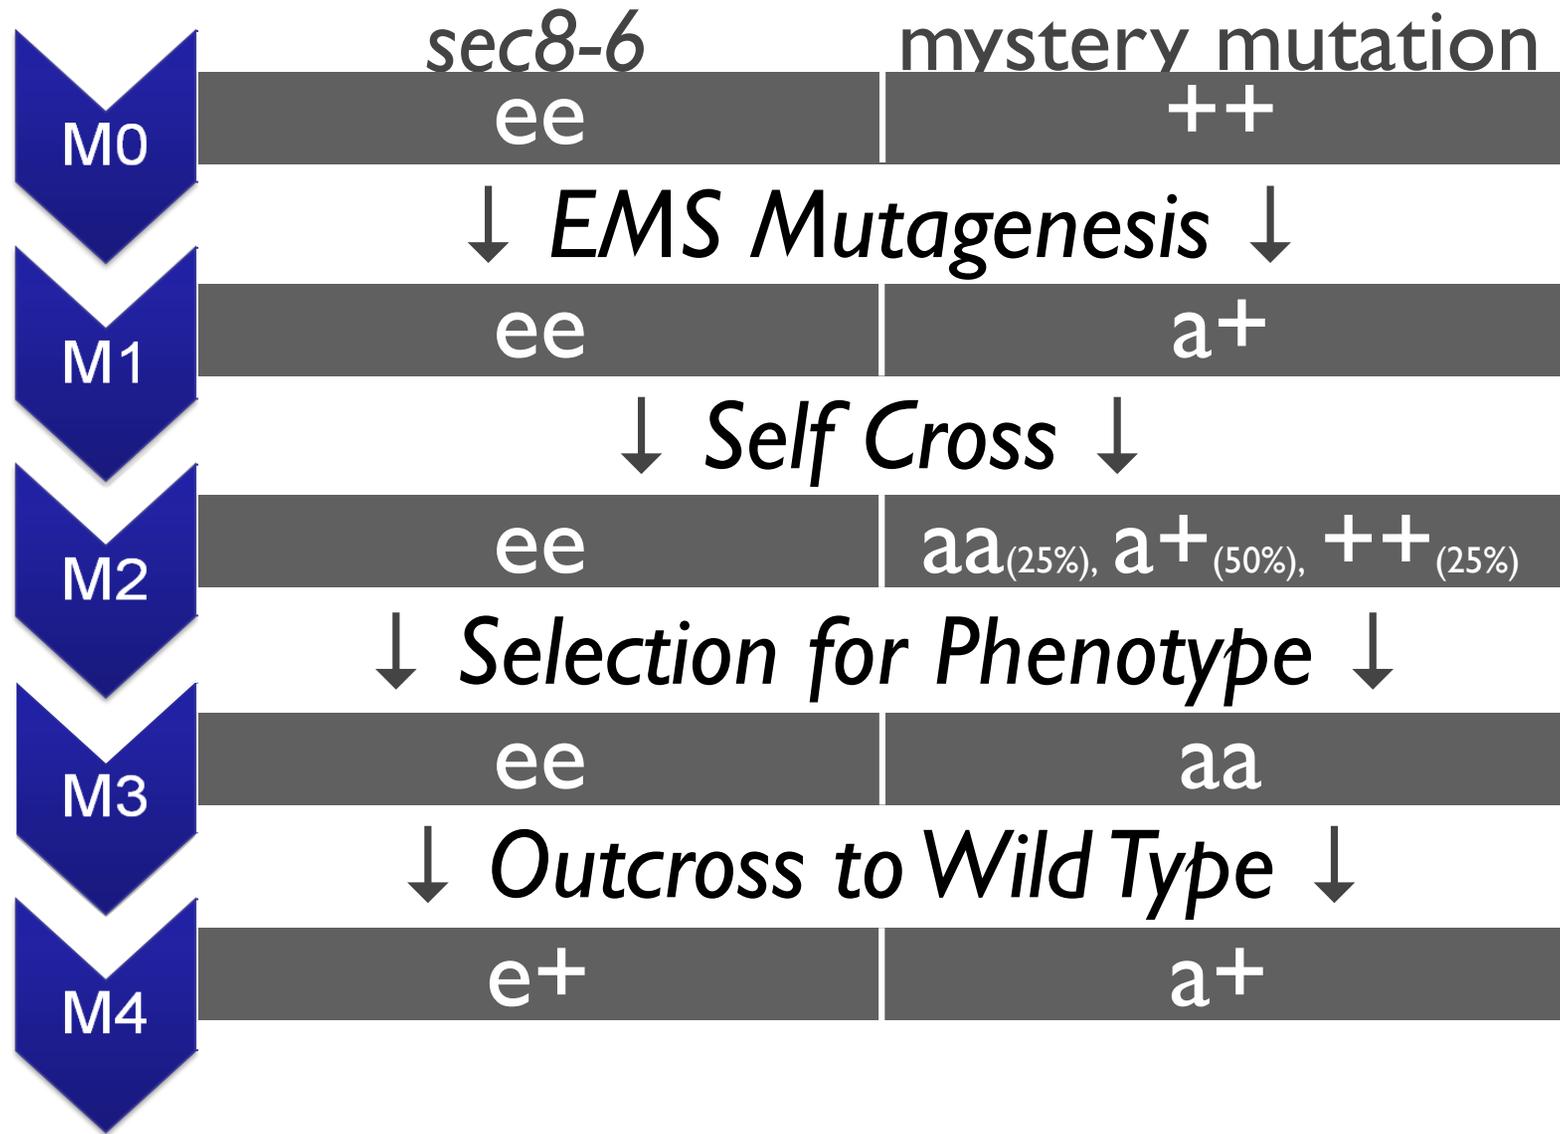

e: sec8-6 (exocyst mutation) allele, **a**: mutant allele from EMS mutagenesis, **+**: wild type allele

The NERD Screen

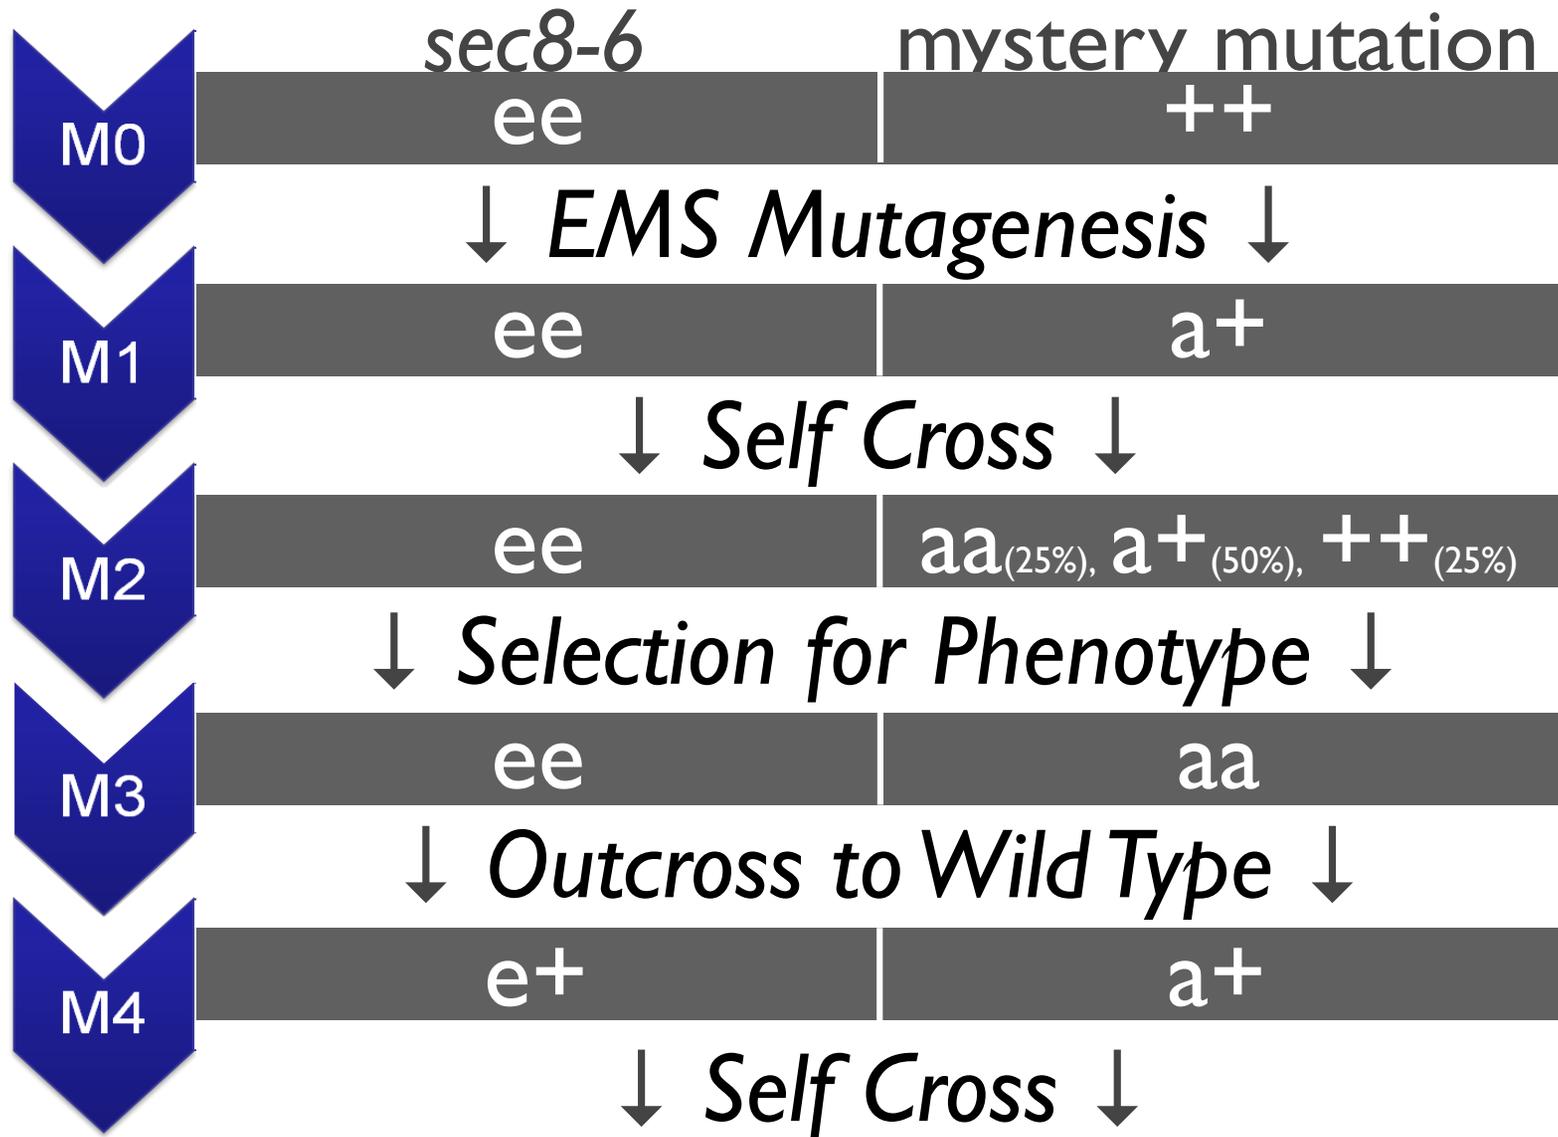

e: *sec8-6* (exocyst mutation) allele, **a**: mutant allele from EMS mutagenesis, **+**: wild type allele

The NERD Screen

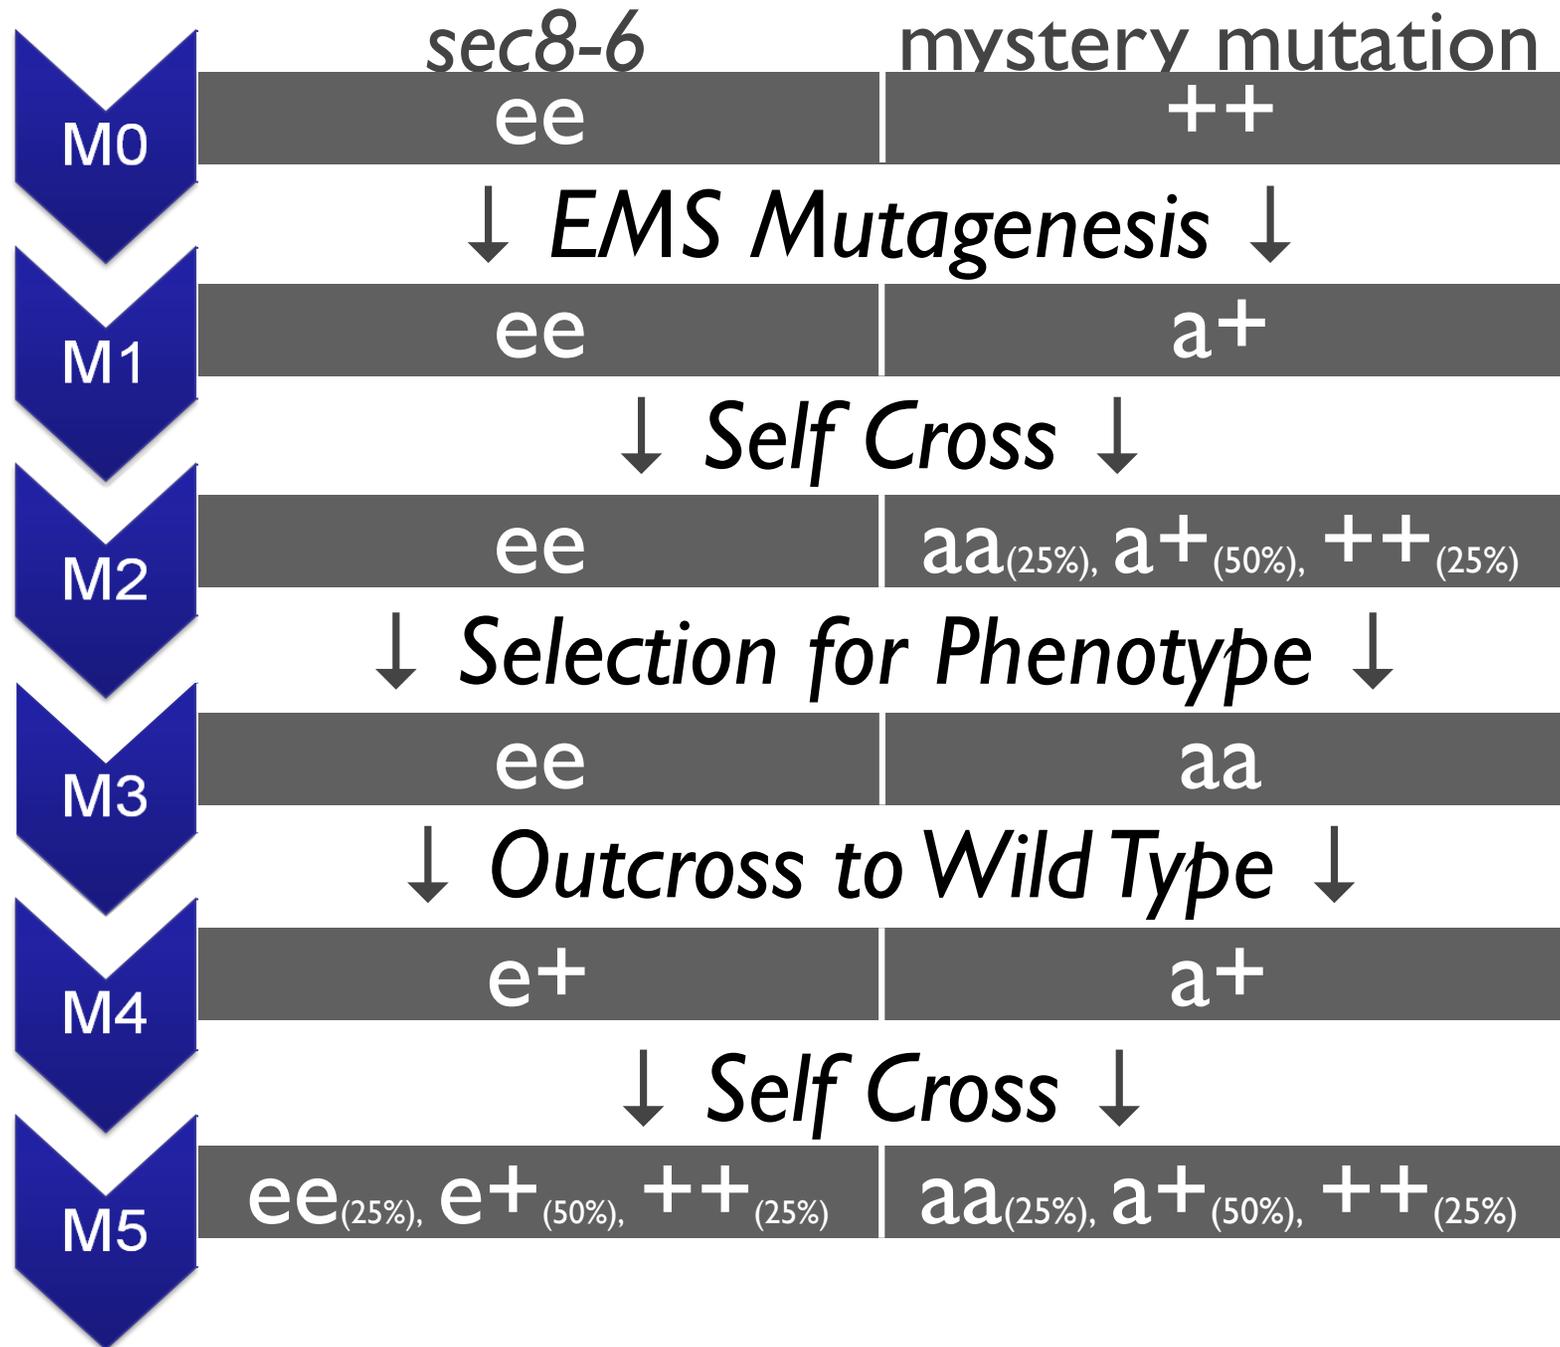

e: sec8-6 (exocyst mutation) allele, **a**: mutant allele from EMS mutagenesis, **+**: wild type allele

The NERD Screen

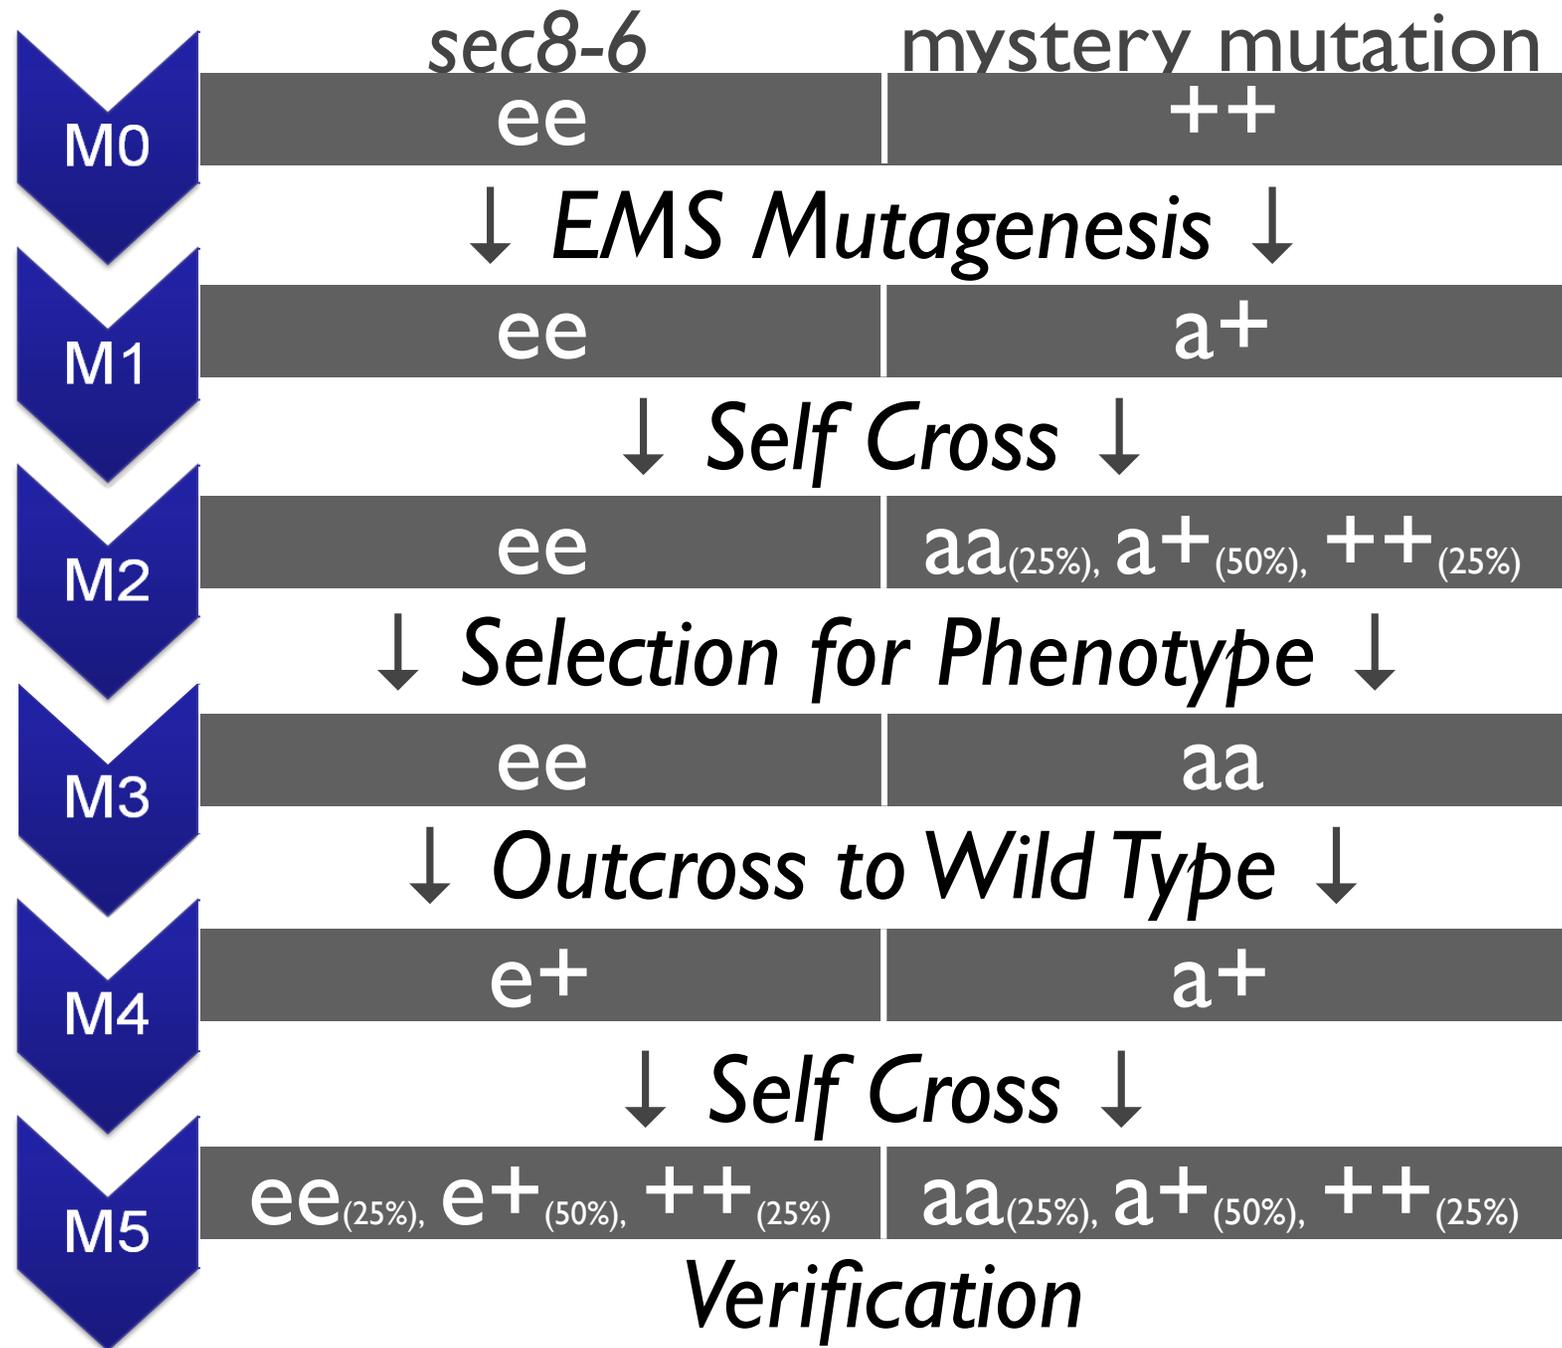

e: *sec8-6* (exocyst mutation) allele, **a**: mutant allele from EMS mutagenesis, **+**: wild type allele

The NERD Screen

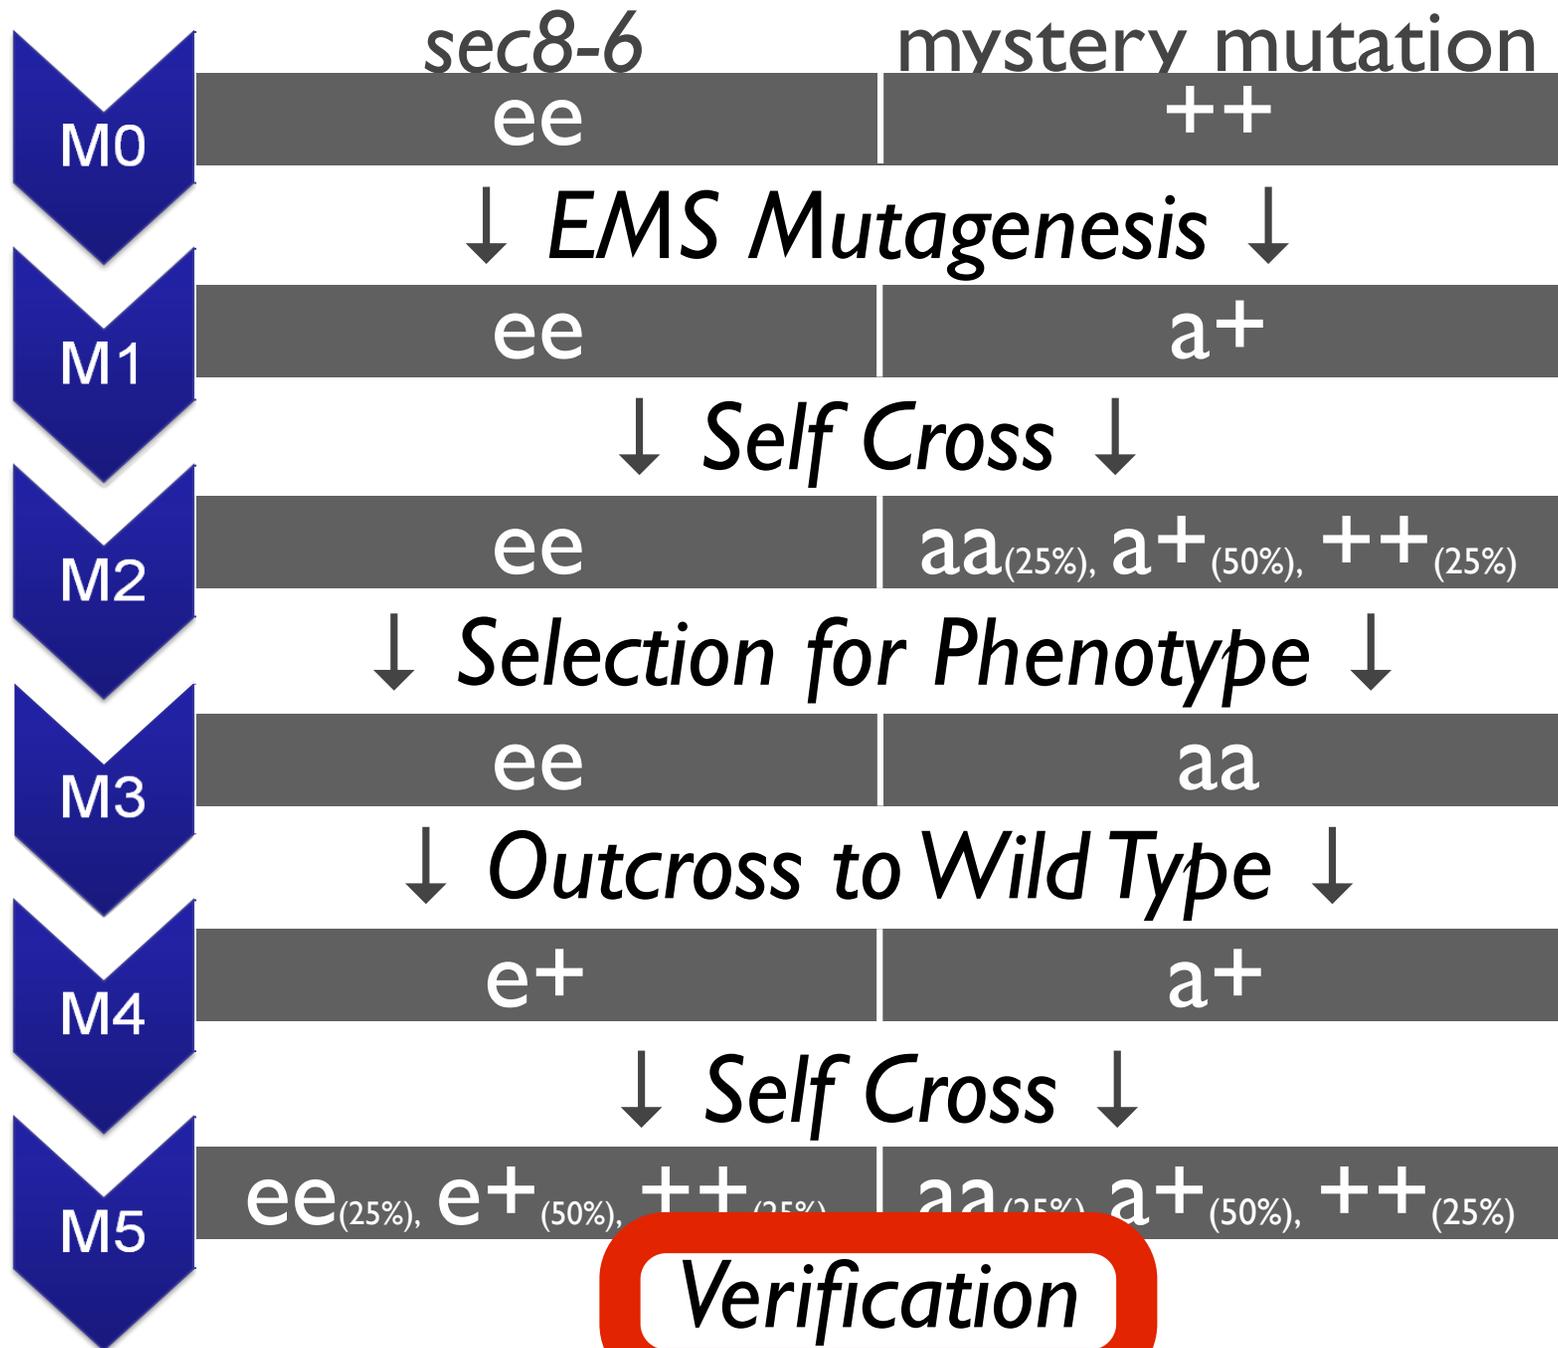

e: sec8-6 (exocyst mutation) allele, **a**: mutant allele from EMS mutagenesis, **+**: wild type allele

The NERD Screen

e: *sec8-6* (exocyst mutation) allele, **a:** mutant allele from EMS mutagenesis, **+**: wild type allele

The NERD Screen

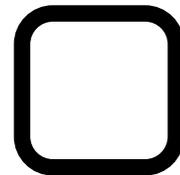

e: *sec8-6* (exocyst mutation) allele, **a:** *mystery mutation* allele, **EMS:** ethyl methane sulfonate mutagenesis, **+**: wild type allele

No Phenotype (3/4)

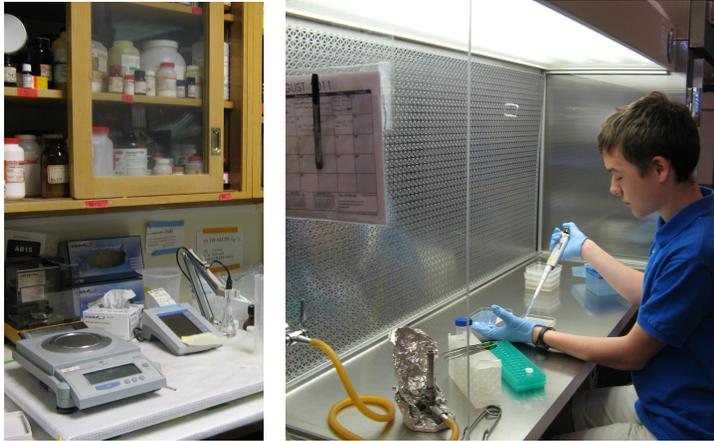

Mutant Phenotype
(3/16)

Severe Mutant
Phenotype (1/16)

e: *sec8-6* (exocyst mutation) allele, **a**: mutant allele from EMS mutagenesis, **+**: wild type allele

Techniques/Process

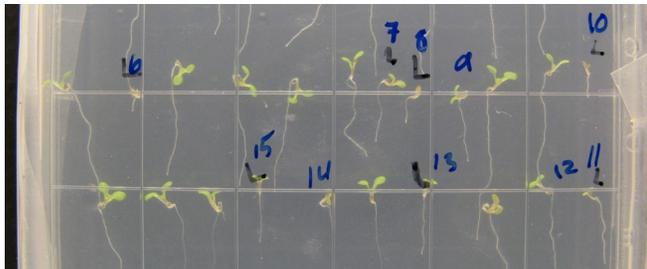

- Plates were poured and planted under a laminar flow hood
- Plants were grown in a climate controlled growth chamber

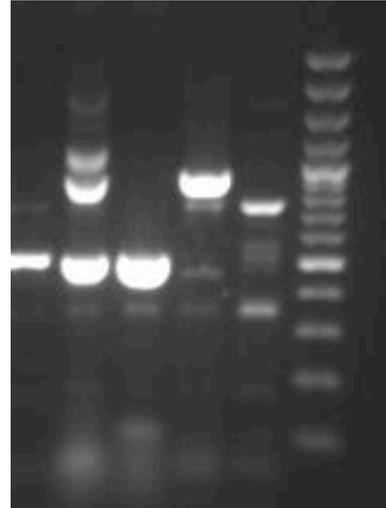

Techniques/Process

- Phenotypic observations were made with the aid of a dissecting microscope

Techniques/Process

- Genotypic observations were made through DNA extraction, PCR amplification, and gel electrophoresis

Family 9

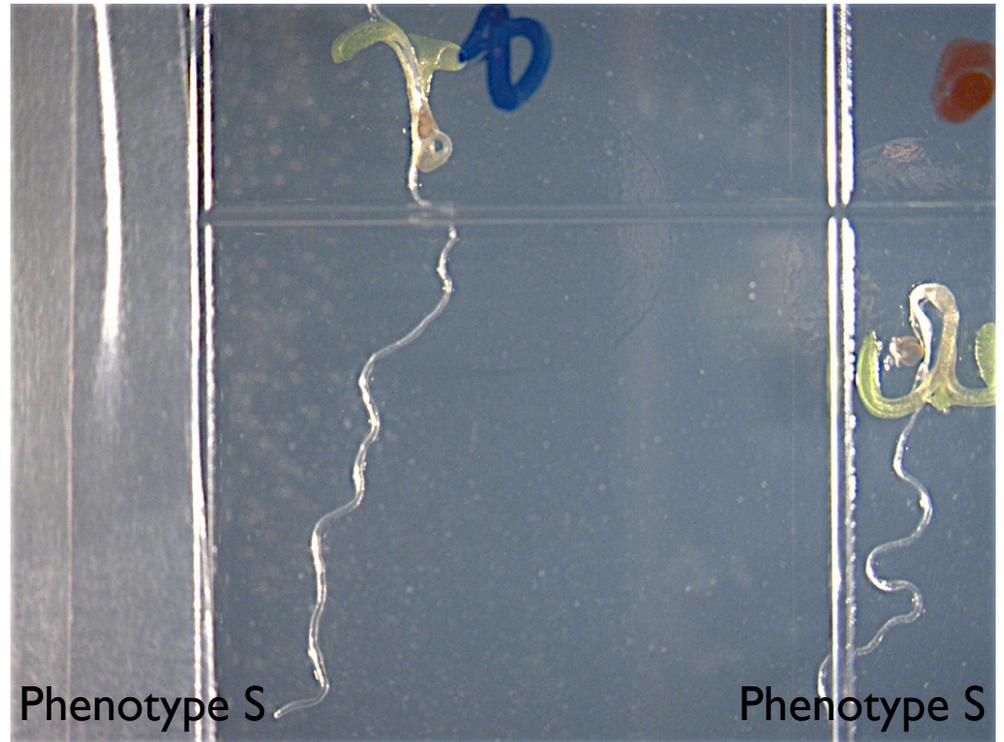

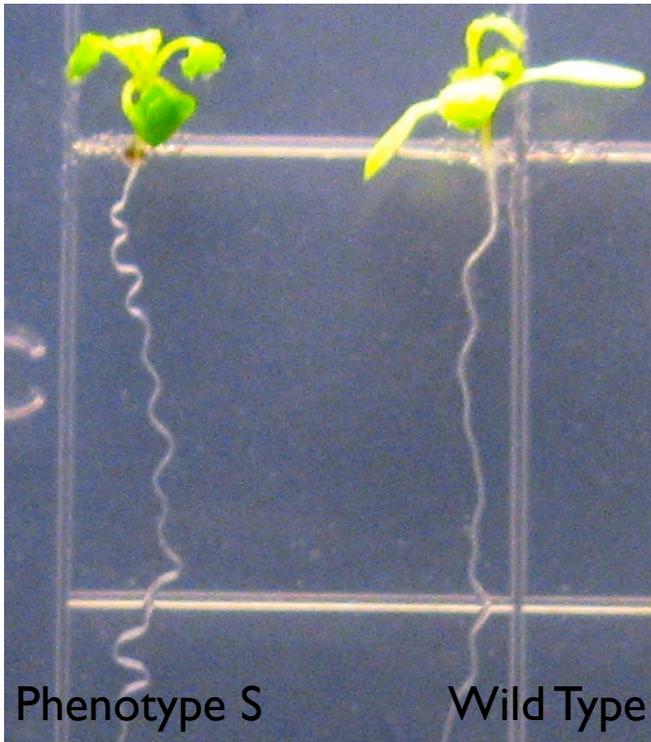

Phenotype S

No Root Hairs, Squiggly Roots

Family 9

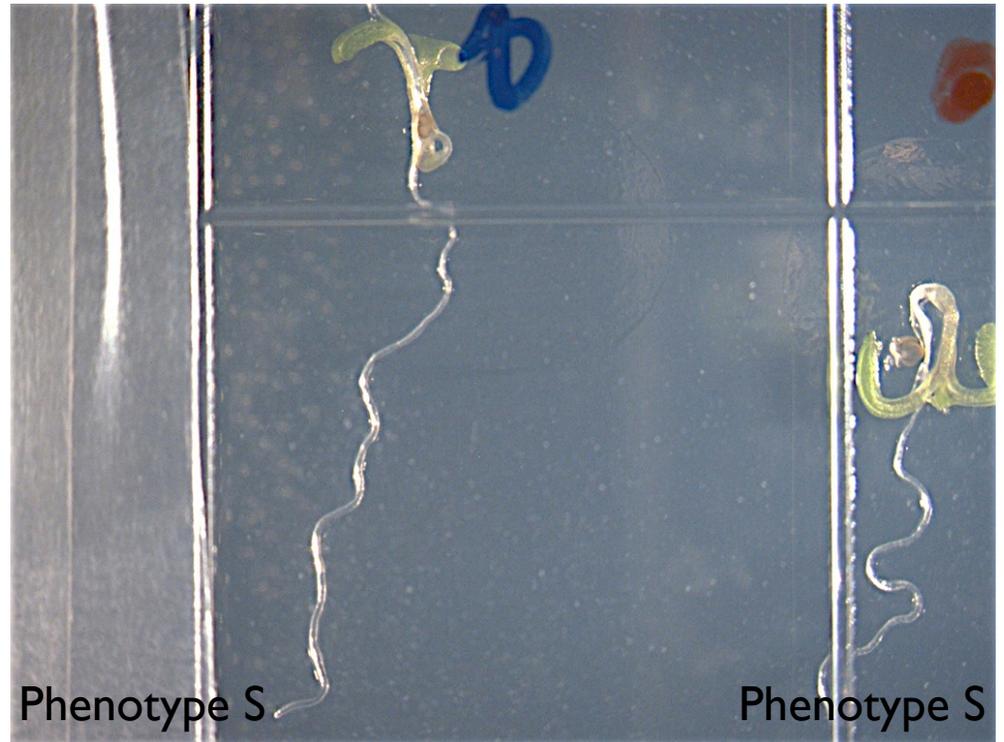

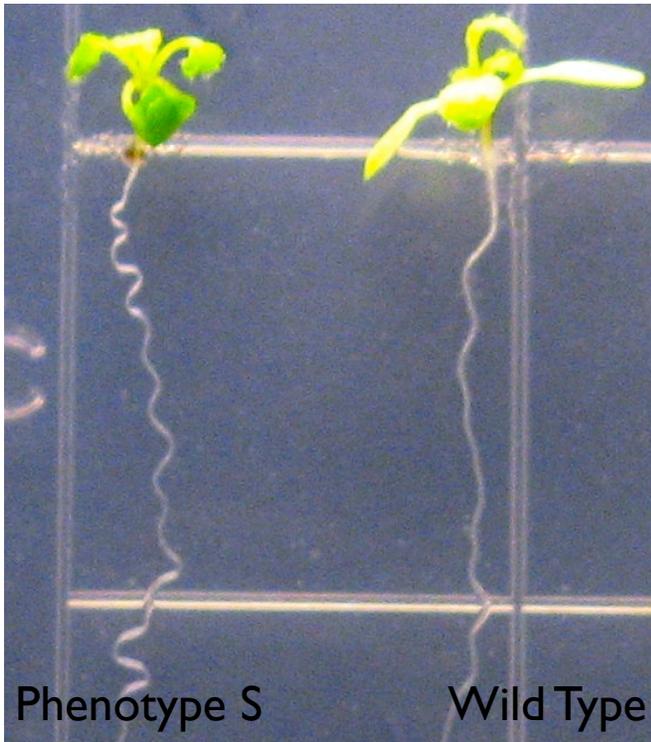

Phenotype S

No Root Hairs, Squiggly Roots

Family 9

Phenotype S

No Root Hairs, Squiggly Roots

Ratio Observed: 56/332 or ~**2.7/16**

Family 9 Genotypes

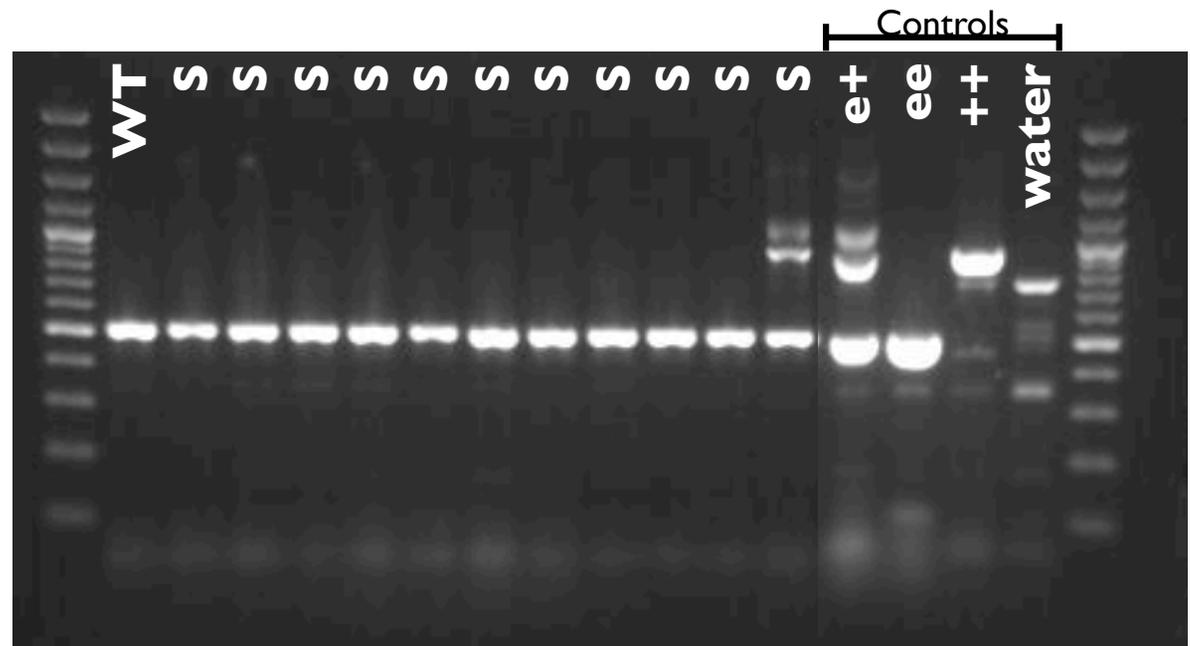

Phenotype	Total	ee		e+		++	
		#	%	#	%	#	%
Negative Result			25%		50%		25%
WT	9	1	11%	5	56%	3	33%
S	20	18	90%	2	10%	0	0%

WT: wild type phenotype

S: squiggly roots/no root hairs phenotype

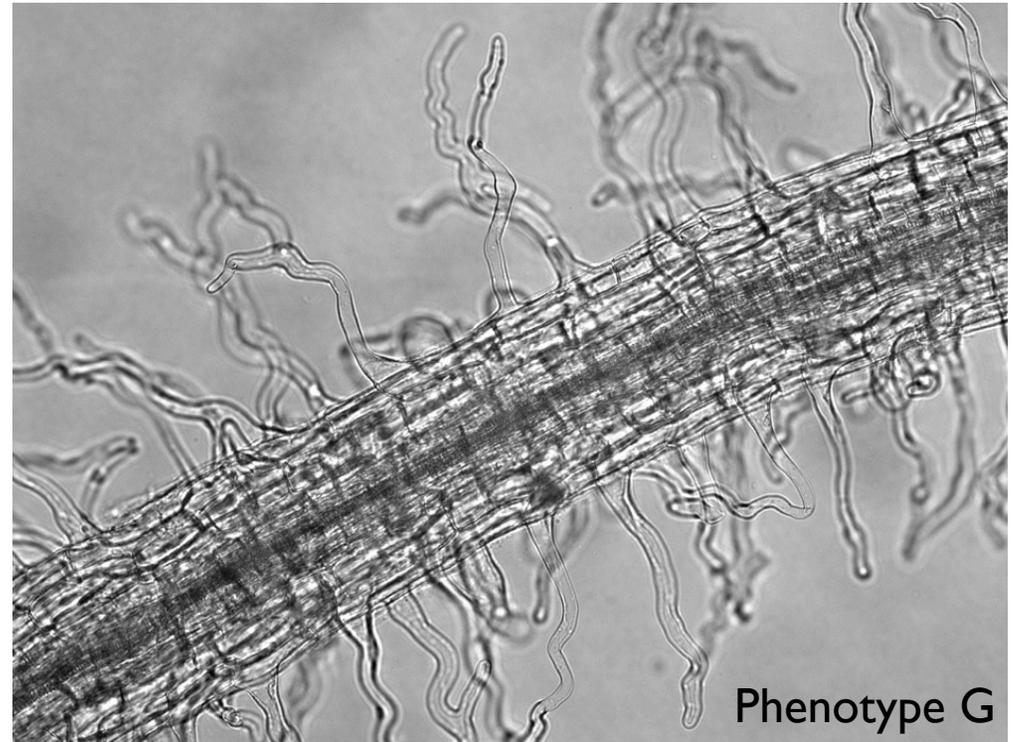

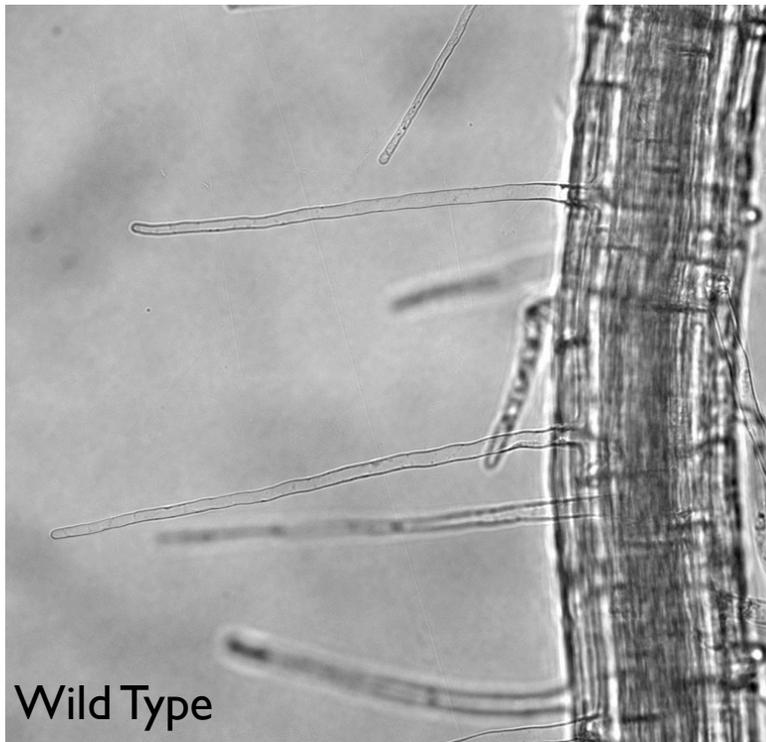

e: *sec8-6* mutation allele

+: wild type allele

Family 10

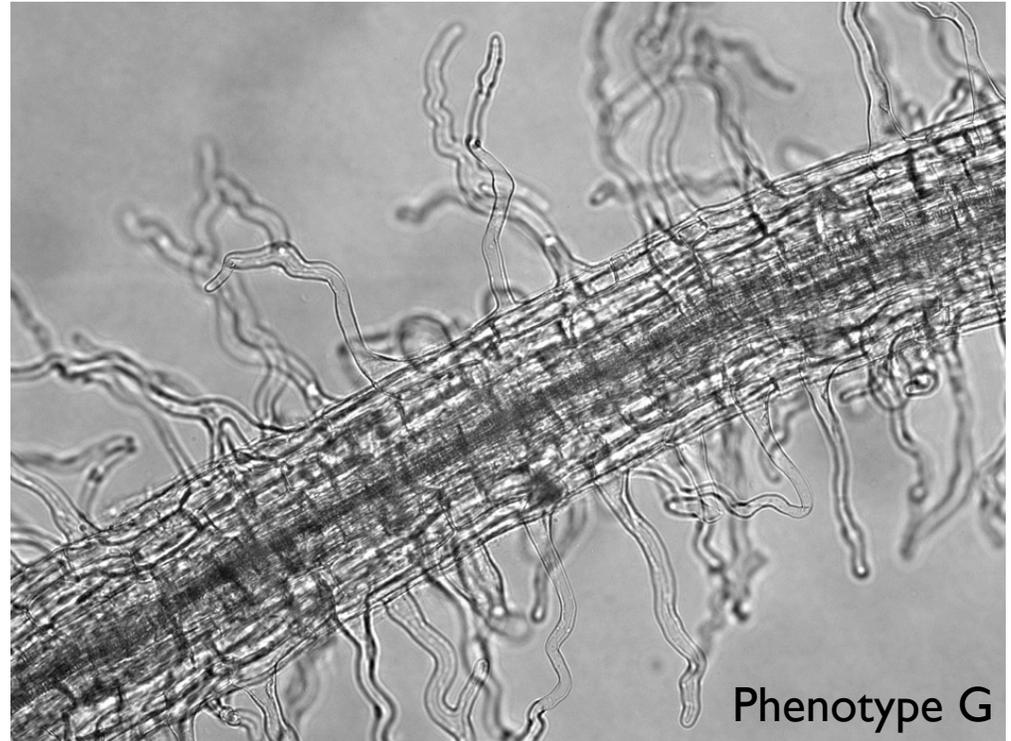

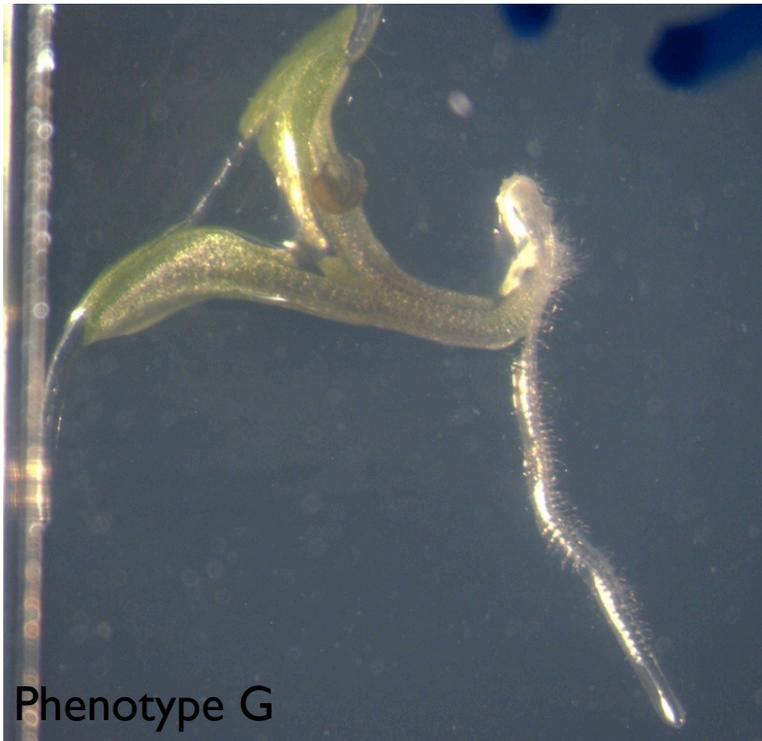

Phenotype G

Short, Dense Root Hairs on a Shorter Root

Family 10

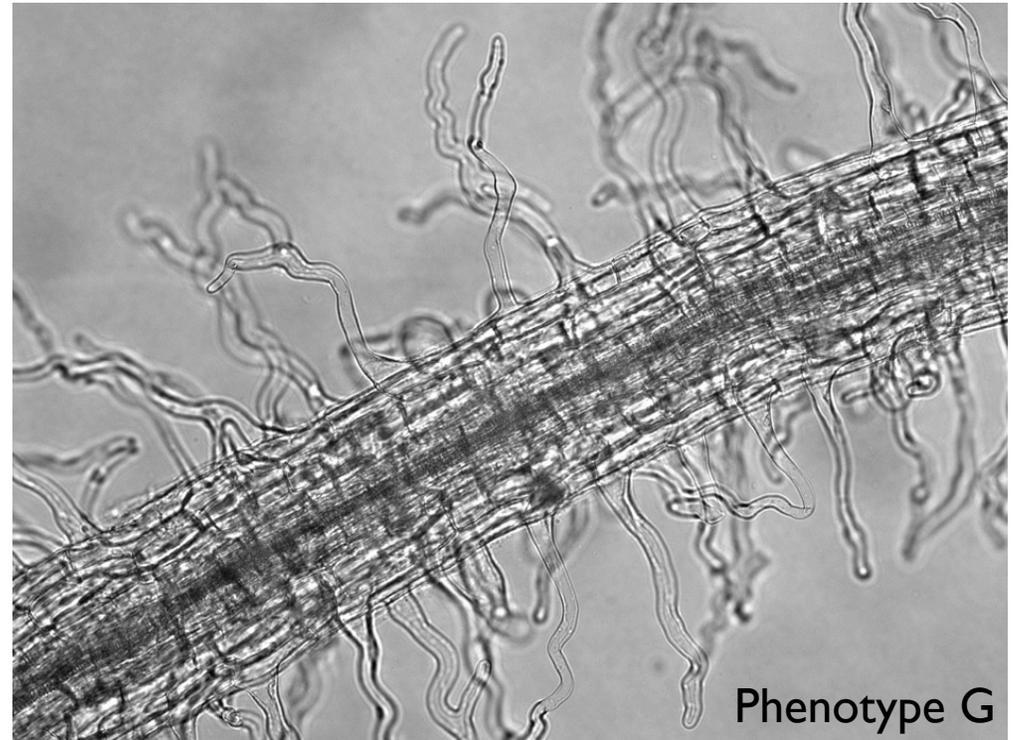

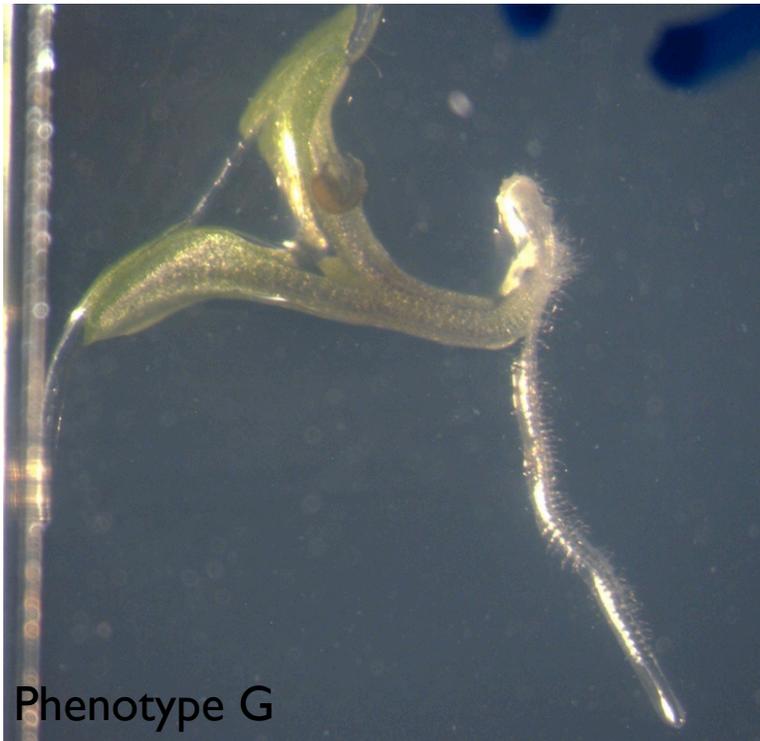

Phenotype G

Short, Dense Root Hairs on a Shorter Root

Family 10

Phenotype G

Short, Dense Root Hairs on a Shorter Root

Ratio Observed: 50/299 or **~2.7/16**

Family 10 Genotypes

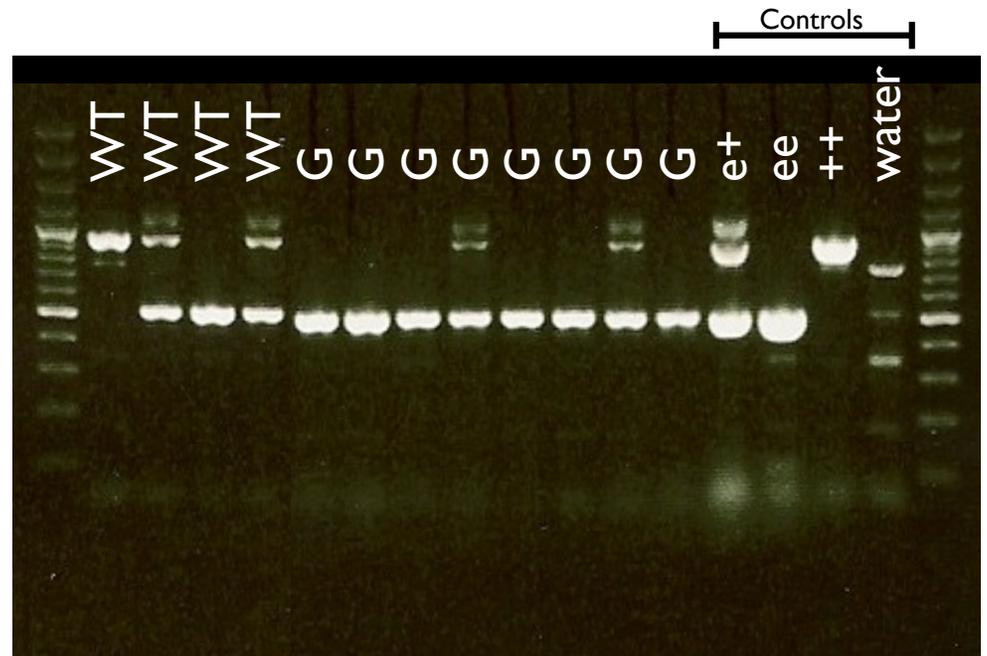

Phenotype	Total	ee		e+		++	
		#	%	#	%	#	%
Negative Result			25%		50%		25%
WT	13	1	8%	8	62%	4	31%
G	15	13	87%	2	13%	0	0%

WT: wild type phenotype

G: short roots/root hairs phenotype

e: *sec8-6* mutation allele

+: wild type allele

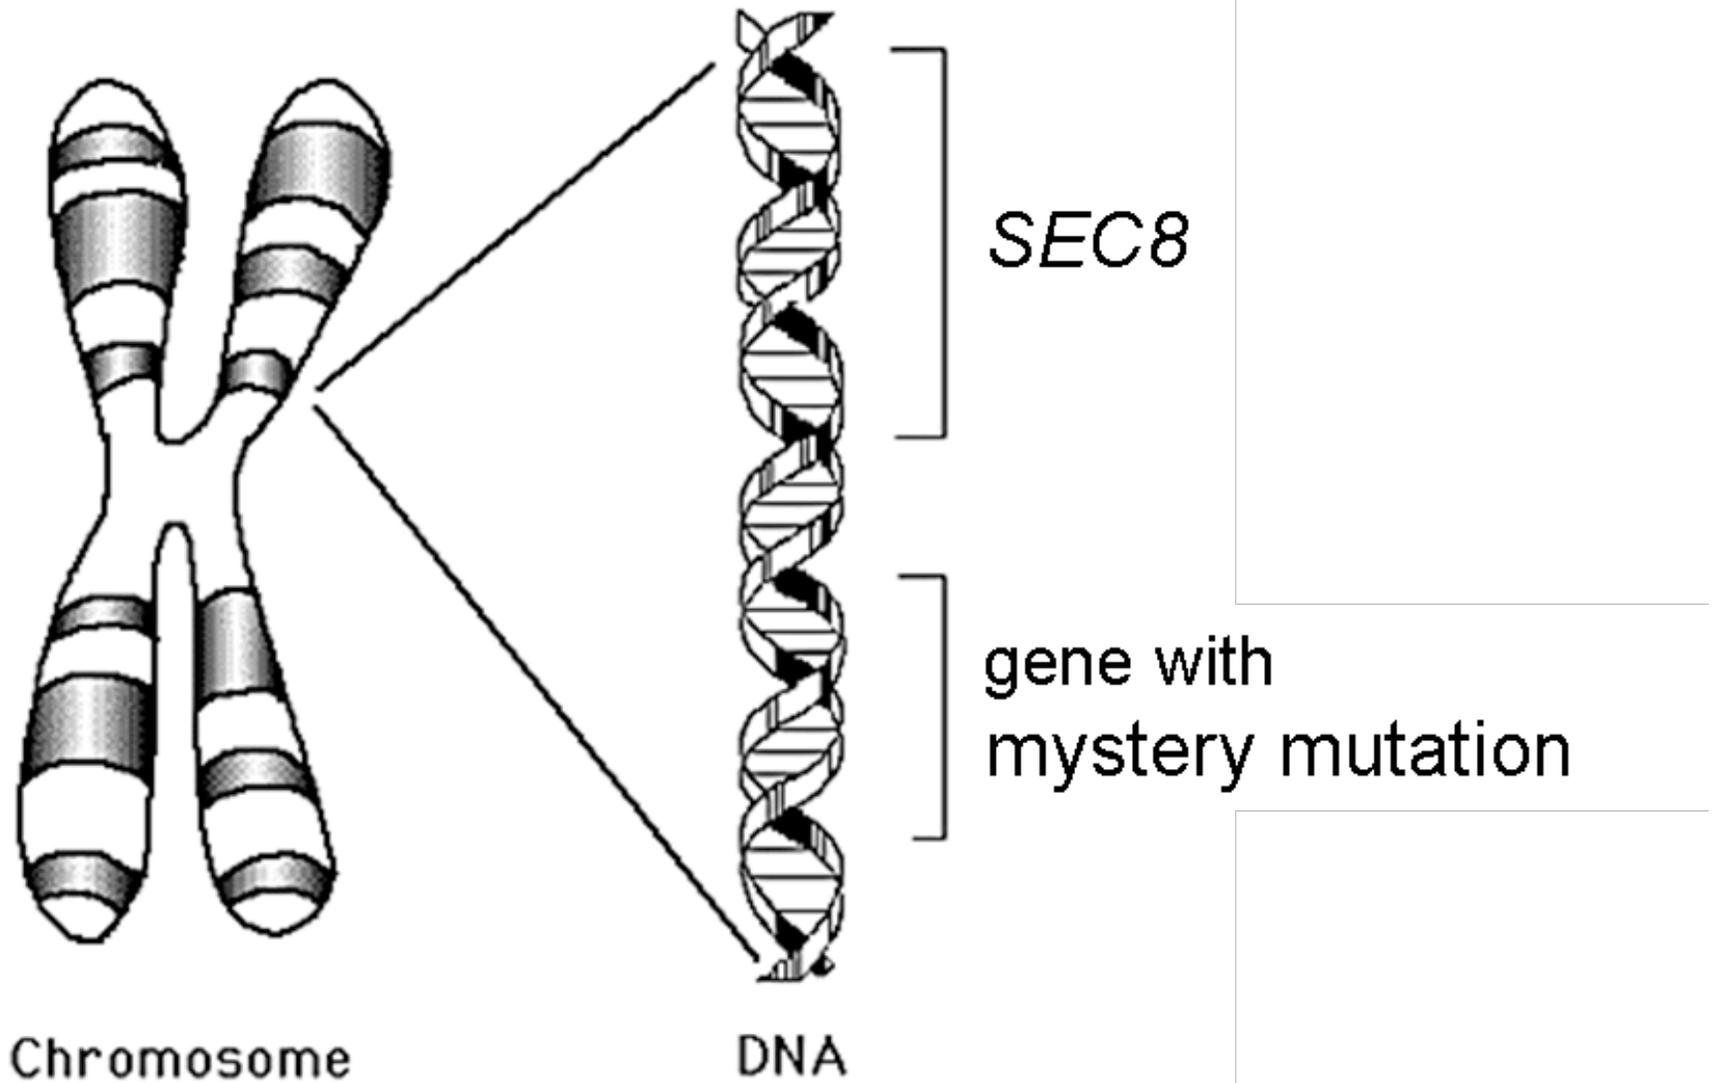

Preliminary Hypothesis A

Phenotype S & Phenotype G

- *sec8-6* and the mutations that cause phenotypes S and G may be linked genes.
- Linked genes are located nearby each other on the same chromosome, increasing their chances of being inherited together.

Preliminary Hypothesis A

Phenotype S & Phenotype G

Preliminary Hypothesis A

Phenotype S & Phenotype G

- In this scenario, the mutated genes that cause phenotype S and G may not be exocyst interactors.

Preliminary Hypothesis B

Phenotype S & Phenotype G

- The mystery mutation may act as a dominant allele.
- Phenotypic expression may occur with only one copy the allele present.
- The mutation would be expressed if a plant were homozygous for *sec8-6* and had one or two copies of the mystery mutation allele.

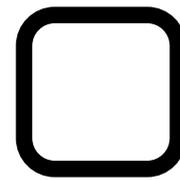

Preliminary Hypothesis B

Phenotype S & Phenotype G

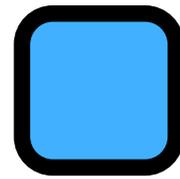

M4 Pollen Parent

M4 Seed Parent

	++	e+	+a	ea
++	++ ++	e+ ++	++ a+	e+ a+
e+	e+ ++	ee ++	e+ a+	ee a+
+a	++ a+	e+ a+	++ aa	e+ aa
ea	e+ a+	ee a+	e+ aa	ee aa

No Phenotype (13/16)

Mutant Phenotype (3/16)

e: *sec8-6* (exocyst mutation) allele, **a**: mutant allele from EMS mutagenesis, **+**: wild type allele

Preliminary Hypothesis B

Phenotype S & Phenotype G

- The phenotypic expression ratio would be 3/16, which is similar to observations.
- In this scenario, the mutated genes that cause phenotype S and G may be exocyst interactors.

Conclusion

- Families 9 and 10 are putative NERDs.
- More study is required to confirm and investigate this finding.
